### **Twin-shot competence by WISKA: Cable glands rethought and grommets with strain relief for multiple cables**

On the Hannover Messe two novelties are awaiting the visitors on the WISKA fair stand. Both benefit from the long standing expertise in twin-shot moulding.

The cable gland **MARATHON** convinces with its new design and elevated strain relief according to category B (EN 62444). This has been realized by separating the sealing from the strain relief function.

The new **MultiCLIXX** combines the advantages of existing grommets by WISKA: Customers can insert up to four cables via the soft membrane component at a minimum of time. Strain relief is accomplished by the intelligent grommet construction.

With the introduction of the Brace cable protection system and the cable entry system CONMAXX in the last year WISKA now offers its customers all cable entry solutions from its own production, including the proven cable gland range.

Besides the product news the focus on the fair is getting to know customers and partners better and deepening the business relation. "A good relationship is based on knowing each other. For good business relations this is extremely important as well as a trust basis", says Ronald Hoppmann, General Manager of WISKA.

This keynote is also reflected in the communication of WISKA and the fair stand which focuses on relationships. Coffee house elements such as furnishings, a coffee bar and a bench invite to linger and have good talks to get to know each other.

„We are convinced that good business works like that. First get to know each other and then talk about our customer´s needs and ours products. “, adds Hoppmann.

The fair stand of WISKA on the Hannover Messe can be found in Hall 13, Stand C76.

### **About WISKA**

WISKA manufactures electrical equipment, lighting products and CCTV camera surveillance systems for shipbuilding and diverse industries. Founded in Hamburg in 1919, the family-owned company today employs over 260 employees worldwide. The product range includes, for example, searchlights, floodlights, reefer container sockets, cable glands, junction boxes and switches, completed by digital CCTV technology. WISKA operates its own research and development facilities and production plants next-door at its headquarters in Germany and has a global network of representatives and subsidiaries who ensure a quick and effective on-site customer service.
