WISKA presents cable entry highlights of 2016 at SPS IPC Drives in Nuremberg

WISKA, the expert for cable glands, has been expanding its product range of cable entry solutions in 2016. In addition to the tried and tested cable glands in polyamide, brass and stainless steel WISKA now offers two entirely new product lines: the cable protection system **Brace** and the modular cable entry system **CONMAXX**. Furthermore the supplier for industry and shipbuilding from Kaltenkirchen has introduced the ShotGLAND series, a gland for extreme temperature environment as well as new venting pressure equalization elements.

At the SPS, Europe's leading exhibition for electric automation, WISKA presents all these product highlights and its extended range in cable entry to the professional public.

The **Brace system** is brand new. Heart of the new product line is the BraceGLAND, an innovative non-metallic fitting, developed and produced in-house at WISKA's headquarters in Kaltenkirchen, North of Hamburg. Thanks to its 360° clasp mechanism, this product is safe to install and has a high integrated strain relief for reliable protection, e.g. against heavy vibration. Furthermore the large sealing area means that no special cutting tool for the conduit is needed. At the same time the high IP protection class reliably ensures that no dust and water can enter. Alongside the innovative non-metallic fitting, WISKA offers an extensive cable protection portfolio of premium non-metallic conduits, as well as sleeves. The development of the WISKA cable protection system was rated as especially innovative by the federal state of Schleswig Holstein and is therefore financially supported with means of the ERDF.

With **CONMAXX**, WISKA presents a modular cable entry system especially well adapted for cabinet applications and electrical housings at InnoTrans. CONMAXX consists of three components: Frame, grid inserts and conical sealing elements. The three components can be compiled individually according to requirement and application. This way, the entry system can be assembled from the inside out. Therefore even subsequent, individual changes to the wiring are no problem due to the optional split sealing elements and the closed frame. With 100 different seals, four frame sizes and four grid inserts, CONMAXX enables an extremely flexible and individual electrical installation.

The ShotGLAND cable gland series from WISKA is one of the flattest cable glands on the market. With silicone sealing, the LT version of the ShotGLAND can be used in temperatures ranging from -60 °C to 180 °C.

SPS IPC Drives will take place from 22 to 24 November 2016. WISKA is located in Hall 5, Stand 445.

About WISKA

WISKA manufactures electrical equipment, lighting products and CCTV camera surveillance systems for shipbuilding and diverse industries. Founded in Hamburg in 1919, the family-owned company today employs over 260 employees worldwide. The product range includes, for example, searchlights, floodlights, reefer container sockets, cable glands, junction boxes and switches, completed by digital CCTV technology. WISKA operates its own research and development facilities and production plants next-door at its headquarters in Germany and has a global network of representatives and subsidiaries who ensure a quick and effective on-site customer service. www.wiska.com
