Moments that connect. Connections that are made to last.

With this slogan, WISKA will be creating a special trade fair experience for its visitors at Light + Building 2026 in Frankfurt – because for WISKA, trade fairs are more than just a date in the calendar; they are an opportunity for personal exchanges about current product topics, smart solutions and innovations, as well as a chance to share special moments together.

Moments that connect.

Experience many exciting stations at the WISKA exhibition stand that will leave a lasting impression. Interact with the new products from the junction box and cable entry ranges – both classic and innovative! Be inspired and impressed by our clever solutions. There will also be celebrations. On 9 March, WISKA invites you to a stand party where you can relax and celebrate together after an intensive day at the trade fair.

Another highlight at the trade fair is part of WISKA's sponsorship programme: the hot air balloon of the Schleswig-Holstein Association of Electrical and Information Technology Guilds is located at the exhibition grounds (Agora) and takes visitors up and down. With this sponsorship, WISKA is sending a clear signal about its own origins and its commitment to the skilled workers of tomorrow.

Connections that are made to last.

This is ensured by the new COMBI® 310 and COMBI® 2516 junction boxes. With the new variants, WISKA's COMBI® series now comprises a total of 11 sizes, making the series even more versatile. The COMBI® 310 junction box, a masterpiece, is compact and spacious with dimensions of 117 x 85 x 51 mm and features the typical COMBI® design with a domed cover, which provides 10% more installation space. This box has 10 x M20 combined threaded and membrane entries as well as 4 rear entries. The new COMBI® 2516 is now the largest version in the COMBI® series. Measuring 260 x 200 x 125 mm, it offers significantly more space with a large clamping range of up to 25 mm².

The new 788 ESKV 32 cable connector offers perfect installation options in the smallest of spaces and enables two cables to be connected with ease. The 788 ESKV 32 is the updated version of the

original PG version and is available with a 5-pole, 6 mm² screw terminal or with 5 WAGO 221-2411 terminals.

The COMBI® 304 system is being expanded

There are now four products that enhance your installation in a wide range of areas. The COMBI® 304 system from WISKA now consists of a rotary switch, a junction box, an LED light and a new socket! The closed type F socket, with IP54 protection, 4 x M20 combined threaded and membrane entries and dimensions of ø 82 x 76 mm, is the perfect addition to the system for providing a power connection in outdoor areas, e.g. for a robotic lawn mower.

About WISKA

Founded in Hamburg in 1919, we are today one of the leading manufacturers of electrical equipment, lighting products and CCTV video surveillance for trade, industry and shipbuilding. We operate our own research and development facilities and production plants next door at our headquarters in Germany. Our global sales network of representatives and subsidiaries ensure a quick and personal on-site customer service for you. The WISKA Group today employs 260 people worldwide.
