Reliable connections. Clear perspectives.

At this year's SMM, WISKA is presenting its versatile product portfolio covering lighting, CCTV video surveillance and electrical installation. At the same time, the company is using the trade fair to strengthen existing industry contacts and set the course for the coming years.

Reliable connections.

You can rely on WISKA not only for the exciting exchange of ideas at the stand and at the stand party on Wednesday, 2 September 2026, from 5 pm. For years, the VARITAIN® reefer container sockets have been the market-leading solution for a reliable power supply on the high seas and in port facilities. The range of lighting and CCTV cameras enhances visibility on board and contributes to safe passage across the world's oceans. Inspired by the first WISKA product – a cast brass cable junction box – the extensive range of cable entries and junction boxes is also consistently designed for use in harsh maritime environments.

Clear perspectives.

The range of WISKA cable glands in accordance with the VG standard is being expanded. New additions to the range include cable glands compliant with VG 88846-4 in Type B with VG earthing inserts, as well as in Type C without earthing inserts. Available in nominal sizes from M12 to M80 with type A strain relief. In the German Armed Forces' equipment and information technology sectors, there is a demand for products that comply with this standard.

In the area of technical outdoor lighting, WISKA offers an impressive range of LED lighting that is particularly well-suited to refit projects. The LED floodlights include the LED Floodlight 5010 and the LED Floodlight 5000. The LED Floodlight 5010 offers a high luminous flux, is available in 1 x 220 W or 2 x 220 W versions and features a separate ballast. The LED Floodlight 5000 is available in four variants ranging from 1 to 4 x 40 W and is ideal as a replacement for traditional halogen floodlights. The range is complemented by the LED luminaire 4010, which enables the replacement of luminaires with fluorescent tubes and comparable MPL systems in engine rooms, corridors and technical areas. The LED searchlight rounds off the range. With a light output of 2 x 18,000 lm, IP66/68 protection ratings and features such as endless rotation, stepless speed control and Morse code operation, it offers maximum versatility and is conveniently operated via a remote control unit.

The highlight of the WISKA CCTV portfolio is the CS-S camera series, featuring a 360° pan-tilt unit, 512x zoom, 4-megapixel resolution and an operating temperature range of -30 °C to +55 °C. As part of its ongoing product optimisation and in light of global requirements, WISKA focuses on CE compliance, secure updates, vulnerability management and robust evidence for networked CCTV systems in the maritime environment.

All products are developed in-house by WISKA; the entire value chain is managed by WISKA. At SMM, WISKA will be exhibiting in Hall B6, Stand 212.

About WISKA®

Founded in Hamburg in 1919, we are today one of the leading manufacturers of electrical equipment, lighting products and CCTV video surveillance for electrical trade, industry and shipbuilding. We operate our own research and development facilities and production plants next door at our headquarters in Germany. Our global sales network of representatives and subsidiaries ensure a quick and personal on-site customer service for you. The WISKA Group today employs over 340 people worldwide. www.wiska.com
