Holdback: SMM special

---

### **New WISKA highlights at SMM**

At this year's SMM, WISKA is presenting several new products from its in-house development. Within its constantly growing range of technical lighting products, the company is presenting the new non-metallic LED multi-purpose luminaire 4010 with a luminous flux of 1,200 up to 7,200 lm and a lifetime of 100,000 hours. In addition to the long standard version with 775 mm, there is also a short version with only 495 mm. The high-performance lighting, optionally also with battery back-up, is corrosion-free and easy to install. It is ideally suited for use on car ferries, among others.

With the new LED searchlight, WISKA extends its existing range with a LED version. Its casing adds a complete new development to the familiar WISKA octagonal design. It can be used as a searchlight or floodlight and offers two times 18,000 lm. The new product features endless rotation, stepless speed control, a home and booster function and can be used at minus 25 °C to plus 45 °C. The LED innovations are rounded off by a new high-lumen output version of the floodlight 5000.

The new CCTV camera series also offers a new design: The new camera station can be rotated 360° endlessly thanks to its newly developed pan-tilt unit, while its variant as a fixed camera housing is fixly installed. With a new compact design without external cables and with an internal connection compartment, the new series replaces the entire previous WISKA stainless steel series.

WISKA will also be showing in its new COMBI 304 MAR series a junction box and a rotary switch at SMM. "In the area of installation material, our new COMBI 304 box brings along our many years of experience in non-metallic installation material from various industrial sectors. The two-component injection moulding made of polypropylene and TPE convinces at IP66/67 rating and is manufactured in our factory. Supplemented by its variant as a rotary switch, our 304 has what it takes to deliver a real alternative to the previous HNA products made of brass," says Ronald Hoppmann, WISKA General Manager, adding "We are very pleased to finally be back at SMM and to talk with our guests."

The WISKA innovations and other products from the range can be found in Hall B6, Stand B6.212.

## About WISKA

Founded in Hamburg in 1919, we are today one of the leading manufacturers of electrical equipment, lighting products and CCTV video surveillance for trade, industry and shipbuilding. We operate our own research and development facilities and production plants next door at our headquarters in Germany. Our global sales network of representatives and subsidiaries ensure a quick and personal on-site customer service for you. The WISKA Group today employs 260 people worldwide.
