Highlights at their “Heimspiel”: WISKA® presents product novelties at SMM

Hamburg, 4 September – At SMM, the world’s leading trade fair for the maritime industry, in Hamburg, the supplier for trade, industries and shipbuilding presents product novelties in the fields of reefer container sockets, CCTV video surveillance, lighting and cable entries.

Driven by their ideas and exhibits of product intelligence for lighting and reefer sockets, WISKA® also wants to discuss possible applications of these in maritime surroundings.

“As a company founded in Hamburg, we have been exhibiting at SMM for decades – and each time are more than happy to do so. We like to see partners, showcase new products and keep in touch about future and current maritime subjects. Exhibiting here at SMM in Hamburg, always feels like a ‘Heimspiel’ for us, which is the German word for “home game”.”, says WISKA® General Manager Ronald Hoppmann. And at this year’s SMM, the company presents several new product highlights.

The VARITAIN® reefer container socket range is famous for meeting most individual demands on board. And now it has been extended by two new spacesavers. The new VARITAIN® PushIn Rack (pic. 1) has been designed in upright position to offer a maximum of reefer connections on the same space. The sockets are designed with a 45° angle to ensure a space-saving product and safe installation. The Advance version (pic. 2) of the PushIn Rack further has an external power connection and the smallest housing of the VARITAIN® series.

„The external powerport significantly simplifies installation as the main power supply is very comfortable to connect. The risk of damages is minimised, because the housing’s lid can stay closed during the whole installation process.“, Ronald Hoppmann explains.

Also the video surveillance range has been extended: WISKA® showcases a new Plastic PTZ IP Dome Camera D100 (pic. 3) for maritime applications at SMM. Also, the camera range has been extended with explosion-proof and nightvision products. This also helps to increase safety and security on board.

When it comes to lighting, the LED Floodlight 5000 is undoubtedly one of their major highlights (pic. 4). It is ideally suited for applications under extreme weather conditions at sea, as it is heat-conductive and corrosion-free due to its special modular design of high-quality plastic modules and stainless steel housing. To meet different lighting requirements, the floodlights is now also available with “narrow” and “wide beam” lens types.

The cable entries range of WISKA® newly also comprises a comprehensive cable protection range with metallic and non-metallic fittings and conduits. Together with the WISKA® typical junction boxes, they cover the majority of electrical installation on board and are also presented at SMM.
