Outside the box thinking: The new junction boxes by WISKA

Kaltenkirchen, 02 March 2018 – Trade and industry supplier WISKA presents its new highlights in installation material at this year's Light + Building in Frankfurt.

This year WISKA have focused on their newly developed junction box range. WISKA has added two new sizes to its popular COMBI series and the WISKA installation box has received a total make-over.

„The new COMBI boxes come with the proven quality of the series, that is characterised by its UV- and ozone resistance“, explains Stefan Stange-Düsterhöft, electrical wholesale and trade sales manager at WISKA.

Just push the cable through the soft membrane and it is automatically sealed with IP66 protection – that is how easy the installation with the new COMBI 116 is. Twice the size as the already established COMBI 108 it offers greater installation space and flexibility.

The new COMBI 206 measures 85x49 centimeters and has a space-saving rectangular form. This makes it perfect for outside applications and LED luminaires. Six threaded membrane entries help create maximum flexibility.

When developing the new installation boxes WISKA has taken into consideration the everyday needs of electricians at work. The new installation boxes offer comprehensive fixing options: whether with cable ties, screws and dowels or with various fixing elements. Furthermore the lid can be fitted tightly without use of a tool or screws.

“The new installation boxes is a continued development of the popular KA series which WISKA initially developed over 80 years ago. For the relaunch we have spoken with electricians about what is important for them. The results have been considered in the development.”, says Stefan Stange-Düsterhöft.

About WISKA

WISKA manufactures electrical equipment, lighting products and CCTV camera surveillance systems for shipbuilding and diverse industries. Founded in Hamburg in 1919, the family-owned company today employs over 260 employees worldwide. The product range includes, for example, searchlights, floodlights, reefer container sockets, cable entries, junction boxes and switches, completed by digital CCTV technology. WISKA operates its own re-search and development facilities and production plants next-door at its headquarters in Germany and has a global network of representatives and subsidiaries who ensure a quick and effective on-site customer service. www.wiska.com
